

PURECL™ Ultra

PURECL™ Ultra is a horseradish peroxidase (HRP)-dependent substrate for analysis of Western Blots and Dot Blots.

Due to its ultra high reactivity PURECL™ Ultra detects very small amounts of protein, in no time. Therefore high dilutions of antibodies can be used. Although the substrate is extremely sensitive, it basically produces no measurable background signals.

The exceptional performance makes PURECL™ Ultra the perfect substrate for detection with the fast and easy Western Blot 2.0 protocol of PURITY™ Western Blot Detection Kits.

PURECL™ Ultra is optimized for detection in CCD-Imaging Systems.

Ultimate purity

Western Blot with PURITY™ and PURECL™ Ultra.

Produkt Art.-Nr.	Inhalt
PURECL™ Ultra 40 ml <i>PU4100020</i>	Luminol/Enhancer Solution 20 ml Stable Peroxide Buffer 20 ml (for ca. 400 cm ² membrane)
PURECL™ Ultra 200 ml <i>PU4100100</i>	Luminol/Enhancer Solution 100 ml Stable Peroxide Buffer 100 ml (for ca. 2000 cm ² membrane)
PURECL™ Ultra 1000 ml <i>PU4100500</i>	Luminol/Enhancer Solution 500 ml Stable Peroxide Buffer 500 ml (for ca. 10.000 cm ² membrane)
